This invention describes a novel antisense oligonucleotides which specifically hybridises to and inhibits the expression of human phosphorionaltade-3-kinase, regulatory subunit 4, piso. The phosphorionaltade-3-kinase regulatory subunit 4, piso. The condition appropriate at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one moiety. The antisense oligonucleotide further comprises at least one moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotide can be used in diagnostics and as research reagents and kits. It can also be used prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. It can also be used to treat a disease or condition associated with phosphoinositide-3-kinase, regulatory conduction associated with phosphoinositide-3-kinase, regulatory chediak-Higashi syndrome or a metabolic disorder, preferably cancer, invention are immunomodulators with cytostatic activity and can be used
                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antisense; inhibitor; hybridisation; human; phosphoinositide-3-kinase; regulatory subunit 4; p150; internucleoside linkage; phosphorothioate linkage; 2'.0-methoxyethyl sugar; 5-methylcytosine; infection; inflammation; tumour formation; hyperproliferative disorder; cancer; Chediak-Higashi syndrome; metabolic disorder; immunomodulator;
invention are immunomodulators with cytostatic activity and can be used
                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Phosphoinositide-3-kinase regulatory subunit 4 p150 fragment 124624.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense compound targeted to a nucleic acid molecule encoding phosphoinositide-3-kinase, regulatory subunit 4, p150, useful for treating cancer, Chediak-Higashi syndrome or a metabolic disorder.
                                                                                                                                             ö
                                                                                                0.4%; Score 20; DB 1; Length 20; 100.0%; Pred. No. 1.4e+02; tive 0; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 20 BP; 6 A; 5 C; 4 G; 5 T; 0 U; 0 Other;

This invention describes a novel antisense oligonucleotides which specifically hybridises to and inhibits the expression of human phosphoinositide-1-kinase, regulatory subunit 4, p150. The phosphoinositide-1-kinase, regulatory subunit 4, p150. The oligonucleotides comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified modely, preferably a 2'-O-methoxyethyl sugar modely. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotide can be used indiagnostics and as research reagents and kits. It can also be used prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. It can also be used to treat a disease or condition associated with phosphoinositide-3-kinase, regulatory subunit 4, p150, e.g. hyperproliferative disorder, preferably cancer, chediak-Higashi syndrome or a metabolic disorder. The products of the invention are immunomodulators with cytostatic activity and can be used

Isolating molecules e.g., DNA, by introducing solution with two the solute molecules into micro flow path to form non turbulent flow, providing physical action to molecule causing difference in flow behavior, separating molecules.

types of

Nakamura H;

Example 3; Page 7; 19pp; Japanese.

The invention relates to a novel method for isolating molecules using a mixer-channel. The molecules are isolated by introducing a mixed solution micro-channel. The molecules differing in molecular weight into a mixer flow path, to form a non turbulent flow, and providing physical action to the molecules by changing the flow state, thus causing different behaviours among different solute molecules, where the calferent behaviour enables uneven distribution of specific kinds of molecules in the flow path, causing separation of the molecules. The molecules in the flow path, causing separation of the molecules. The substrate with a micro flow path, having one or more curved portions, a substrate with a micro flow path, having one or more curved portions, a sample intake unit at one side and a sample removal opening at the other sample intended the curved portion. The method is useful for isolating contion or outside the curved portion. The method is useful for isolating contines, e.g. polymer compounds, DNA or proteins. The method enables simple and efficient separation of molecules by utilising specific flow behaviour in a non turbulent flow, in a micro flow path, where a large curved in the exemplification of the invention.

Nucleotide sequences encoding mycrene synthase, limonene synthase and pinene synthase from Grand fir may be incorporated into any organism pinene pinenes from Grand fir may be incorporated into any organism pinenes pineate plant, animal, microbe), or derived cell culture that complete the production of the aforementioned produces geranyl diphosphate for the production of the aforementioned carginary also be used for the production or modification of flavour and carma properties, improvement of defense capability, and the alteration of their ecological interactions mediated by mycrene, limonene, pinene, or their derivatives. In particular they can be used for the production or their derivatives in particular they can be used for the production or or their derivatives in particular they can be used for the extraction of oil or meal. Onlya encoding mycene of plant sedal for the extraction of oil or meal. Onlya encoding mycene squances of different plant synthase enzymes, four conserved sequences of different plant synthase enzymes, four conserved sequences of different plant synthase enzymes, four conserved sequences of different plant synthase enzymes, four construct to construct to one of these primers (AAXO8649 was an antisense primer and used for probes (AAXO86549 generated a pcR product which was 110 base pairs in the amplified product was used in a plasmid construct to crassrom E.coli XLI-Blue cells and the inserts were sequenced. Four conserved sequence given in AAXO8643. The other clones is the myrcene of synthase sequence given in AAXO8643. The other clones is the myrcene of escribed in AAXO864-5.50 were identified for construction of three degenerated a pcR product was used in a plasmid construct to crassrom E.coli XLI-Blue cells and the inserts were sequenced using the primers described in AAXO8643. The other clones is the myrcene conserved sequences were identified for construction of three degenerated a pcR product which was approximately 1020 base pairs in certains of AAXO86651. Were seed to subclone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid encoding monoterpene synthases, for increasing terpene synthesis in plants, e.g. for increasing resistance to pests or for treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene, (-)-apha-phnene synthase, limonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of microbial production of riboflavin using a riboflavin-producing microorganism of the genus Ashbya in which at least two of the products of the genes rib1, rib2, rib4 and rib7 have greater activity than in the wild type organism ATC 10895. Riboflavin (vitamin B2) is an additive for human foods and animal fodder. The present sequence is a PCR primer used to isolate the Ashbya gossypil rib7 gene which was used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         virucide; gene therapy; hantavirus; M segment; L segment; S segment; hantavirus; hantavirus; hantavirus; hantaan virus; HNTV; DNA vaccine; HNTV M genomic segment; pWRG/HTN-M9(x);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Microbial production of riboflavin (vitamin B2), useful as additive for human food or animal fodder, comprises growth of microbes in which activity of rib gene products is increased.

                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                              The invention describes a nucleic acid (I), or its fragment, comprising a fully defined sequence of 24 base pairs, as given in the specification.

Also described are: a recombinant DNA construct comprising a vector, at least one hantavirus M gene nucleic acid fragment and the nucleic acid fragment (I); a composition (II) comprising inert particles and a nucleic acid coated onto the inert particles producing nucleic acid coated or particles, the nucleic acid comprising a promoter operative in the cells of a mammal and a hantavirus polynucleotide M segment encoding G1 and G2 from one or more hantavirus polynucleotide M segment encoding G1 and G2 from one or more hantavirus interapeutic composition (II) and a pharmaceutical excipient; inducing a protective immune response against comparaints, the vaccine comprising the composition (II) and an antavirus infection in a mammal; a vaccine against infection with the composition (II) and ancillary reagents for detecting the composition (II) and ancillary reagents for detecting the presence or absence of hantavirus antigens in a sample. The composition comprising the composition (II) and ancillary reagents for detecting the formal methods are useful for diagnosing, preventing and treating hantavirus infection. This sequence represents an exogenous DNA associated with the function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

The sequences can be used in the treatment of lymphadenoma, cancer, dysgenopathy, phlogosis, immune diseases, haemopathy and HIV infection. The present
                                                                                                                                                                                                                                                       The sequences given in AAQ47176-77 represent triplex forming oligonucleotides which bind to the mRNA sequence of the MHC class II locus DR A structural gene at positions 851-876. The sequences given in AAQ47178-80 represent control oligomers which contain base compositions similar to that around this DR A region but not containing the correct sequences. DR A is a transplantation antigen. Binding of this sequence to the DR A gene inhibits antigen production. This method may be used for treating individuals with autoimmune disease, characterised by dysfunctional expression of a transplantation antigen. It may also be used to produce cells which are more easily transplanted into a recipient. (Updated on 25-WAR-2003 to correct PN field.)
                                                             - using anti-sense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human tumor necrosis factor receptor-associated factor 16 and encoded polynuclectide, applicable in diagnosis and treatment of e.g. cancer, hemopathy, HIV infection, immunological diseases and various inflammations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                         Depletion of transplantation antigens in donor cells - using anti-ser or triplex-forming oligonuclectide(s), used for treating auto-immune disease and in transplants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, TNF receptor-associated factor 16; lymphadenoma; cancer; dysgenopathy; phlogosis; immune disease; haemopathy; HIV infection; tumour necrosis factor; cytostatic; virucide; immunomodulator; antiinflammatory; haemostatic; gene therapy; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the

The invention relates to inhibiting angiogenesis in a subject, comprising administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first contenier housing the antiangiogenic nucleic acids, and instructions for administering them to a subject having a condition characterised by unwanted angiogenesis. The method is useful for inhibiting angiogenesis associated with solid tumour growth, tumour metastasis, precancerous lesson, rheumatoid arthritis, psoriasis, diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemobylilac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, sclaroderma and hypertrophic scars. The present sequence is an antiangiogenic nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inhibiting angiogenesis in a subject, involves administering at least one antiangiogenic nucleic acid molecule to the subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Anglogenesis inhibitor; ss; anglogenesis; solid tumour growth; tumour metastasis; precancerous lesion; rheumatoid arthritis; psoriasis; diabetic retinopathy; retinopathy of prematurity; macular degeneration; corneal graft rejection; neovascular glaucoma; retrolental fibroplasia; rubeosis; Osler-Webber Syndrome; myocardial anglogenesis; plaque neovascularisation; telanglectasia; haemophiliac joint;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaрв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

New immunostimulatory oligonucleotide comprising non-palindromic nucleic acid sequence motif, useful for inducing B-cell activation, treating, preventing or ameliorating immune system disorder or tumoral disease e.g. melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G nucleic acid in an aerosol formulation. The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ps; non-CpG; immunostimulatory; non-palindromic; immune response; proliferation; differentiation; cytokine; antibody production; B-cell; plasmacytoid dendritic cell; immunomodulator; gene therapy; chronic myelogenous leukaemia; melanoma; Kaposi's sarcoma; renal cell carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                    Treating and/or preventing allergy or asthma using an immunostimulatory nucleic acid alone or in combination with an asthma/allergy medicament.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a method of treating non-allergic inflammatory disease comprising administering to a subject having or at risk of developing a non-allergic inflammatory disease an immunostimulatory nucleic acid for prevention or treatment of the disease. The method is useful for treating non-allergic inflammatory diseases, such as psoriasis, eczema, allergic contect dermatitis, latex dermatitis or inflammatory bowel disease e.g., ulcerative colitis or Crohn's disease. This sequence represents an immunostimulatory nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                              Immunostimulatory; antiinflammatory; dermatological; antipsoriatic; antiulcer; gene therapy; vaccine; non-allergic inflammatory disease; psoriasis; eczema; allergic contact dermatitis; latex dermatitis; inflammatory bowel disease; ulcerative colltis; Crohn's disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Treating non-allergic inflammatory diseases, such as psoriasis, ecz allergic contact dermatitis, latex dermatitis or inflammatory bowel disease by administering an immunostimulatory nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

This invention relates to novel immunostimulatory oligonucleotides that contain a non-palindromic sequence motif. Specifically, it refers to DNA oligonucleotides [without a CpG motif), which can stimulate an immune response in animals of the order of primate, including humans. The immune response is characterised by the proliferation, differentiation, cytokine and antibody production in B-cells, as well as cell differentiation and cytokine production in B-cells, as well as cell differentiation and invention describes immunomodulator compositions that also comprise an antigen selected from, for example, viruses, bacteria, parasites, tumour cells and glycolipids. As such, these DNA oligos can be used in gene ameliorating an immune system disconder or a tumoural disease including chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell carcinoma. This oligonucleotide sequence is a non-CpG DNA oligo of the

response is characterised by the proliferation, differentiation, cytokine and antibody production in B-cells, as well as cell differentiation and cytokine production in plasmacytoid dendritic cells. The present invention describes immunomodulator compositions that also comprise an antigen selected from, for example, viruses, bacteria, parasites, tumour cells and glycolipids. As such, these DNA oligos can be used in gene therapy for inducing B-cell activation, treating, preventing or therapy for inducing B-cell activation, treating, preventing or charactering an immune system disorder or a tumoural disease including chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell carcinoma. This oligonucleotide sequence is a non-CpG DNA oligo of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses a microarray comprising a plurality of nucleic acid probes including one of 2,018,500 fully defined sequences, or its perfect match, perfect mismatch, antisense match or antisense mismatch. Also disclosed is a method of gene expression analysis. The array is used in monitoring gene expression levels by hybridisation of tag-labelled compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises hybridisation at least one or more nucleic acid probes are appointed acid probes and detecting the hybridisation. The nucleic acid probes are attached to a solid support. The analysis comprises monitoring gene expression levels, identifying biallelic markers or polymorphisms, or family members of a gene and a cross-species comparison. Each of the nucleic acids further comprises a tag sequence. The array of nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New array of nucleic acid probes, useful for in situ hybridization, in Southern, Northern or dot-blot hybridization to identify or detect the sequence or specific mutations of any gene.
                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention discloses a microarray comprising a plurality of nucleic acid probes including one of 2,018,500 fully defined sequences, or its perfect match, perfect mismatch, antisense match or antisense mismatch. Also disclosed is a method of gene expression analysis. The array is used in monitoring gene expression levels by Mybridisation to a DNA library, in monitoring gene expression levels by Mybridisation to a DNA library, compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises of at least one target sequence in the method of analysis comprises the probes and detecting the hybridisation. The nucleic acid probes and detecting the hybridisation. The nucleic acid probes are attached to a solid support. The analysis comprises monitoring gene expression levels, identifying biallelic markers or polymorphisms, or family members of a gene and a cross-species comparison.

Sor family members of a gene and a cross-species comparison nucleic acid further comprises a tag sequence. The array of nucleic acid further comprises a tag sequence or specific blot hybridisation to identify or detect the sequence or specific
                                                                                                                                                                                                                                                                                                      ö
    probes is useful in in situ hybridisation, in Southern, Northern or dot-
blot hybridisation to identify or detect the sequence or specific
mutations of any gene, in mapping the 5' termini of mRNA molecules by
primer extensions or in screening cDNA or genomic libraries or subclones
for additional subclones containing segments of DNA that have been
isolated and previously sequenced. The sequence presented is one of the
nucleic acid probes incorporated in the microarray. Note: The sequence
data for this patent can also be obtained in electronic format directly
from USPTO at seqdata.uspto.goc/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New array of nucleic acid probes, useful for in situ hybridization, in Southern, Northern or dot-blot hybridization to identify or detect the sequence or specific mutations of any gene.

The isolated DNA molecule is useful to transfect a plant and can be used as a general tool for causing male sterility in plants. It is also useful for producing a totipotent cell or a male sterile plant. The present sequence represents a N. tabacum PCR primer.
                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated DNA molecule that is expressed in stressed microspores, useful for causing male sterility in plants or for producing a totipotent
mutations of any gene, in mapping the 5' termini of mRNA molecules by primer extensions or in screening cDNA or genomic libraries or subclones for additional subclones containing segments of DNA that have been isolated and previously sequenced. The sequence presented is one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tobacco; stressed microspore; plant; transfect; male sterility;
                                              isolated and previously sequenced. The sequence presented is one of the nucleic acid probes incorporated in the microarray. Note: The sequence data for this patent can also be obtained in electronic format directly from USPTO at seqdata.uspto.goc/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense sequences have one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical proparation comprising (I); reducing (M) appB-100 levels or glucose-6-phosphatase levels in a subject; producing (I); antiolves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device the modification appeal of levels or glucose-6-phosphatase levels. (MI) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (MI) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of alsoful clevels of lipid metabolism. The

             dyslipidaemias, hypercholestorolaemia, statin-resistant hypercholestorolaemia, coronary artery disease (CAD), coronary heart hypercholesterolaemia, coronary artery disease (CAD), coronary heart disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose-production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence represents a hepatitis C virus (HCV) antisense oligonucleotide that can be used to control HCV gene expression.

The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100 (evels or glucose-G-phosphatase levels in a subject; producing (II); tatabilising (I), involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (II) is useful for reducing apoB-100 levels or glucose-G-phosphatase levels. (MI) is useful for reducing apoB-100 levels or glucose-G-phosphatase levels. (The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apos-100, elevated or otherwise unwanted cypression of apos-100, elevated or otherwise unwanted cyprescholesterolaemia, coronary attery disease (CDD), coronary heart of disease (CDD), and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating quested placeder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), incurological disease (e.g., Huntington disease or epinocerbellar ataxia) or viral disease (e.g., Huntington disease or epinocerbellar ataxia) or viral disease (e.g. ö Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications. The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have cone or more asymmetrical 2'-0 alkyl modifications, the antisense cone or more asymmetrical phosphorothioate modifications comprises and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (I); reducing (I); reducing (I); involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where controducing one or more asymmetrical modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where controducing one or more asymmetrical modification in the sequence of controducing one or administer a composition for its use; and a device that can be dispense or administer a composition comprising (I). II is control for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or cherwise unwanted expression of apoB-100, elevated or otherwise unwanted control from a disorder characterised by elevated or cherwise unwanted expression of apoB-100, elevated or cherwise unwanted cyclosersorlestorolaemia, statin-resistant control cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

consequence and an antisense agequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense sequence and an antisense sequence where the sense sequences have one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100 levels or glucose-6-phosphatase levels in a subject; producing (I); ctabilising (I); involves selecting a sequence with activity and catabilising one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or cherwise unwanted expression of apoB-100, elevated or otherwise unwanted captering in and/or disregulation of lipid metabolism. The disorder is chosen from the HDI/LDL cholesterol imbalance, dysludaemia, hypercholesterolaemia, attern resistent hypercholesterolaemia, coronary attery disease (CHD), coronary heart chise disease (CHD) and atherosclerosis. (I) is administered to a subject to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; RNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; disbates; cancer; breast cancer; colon cancer; lung cancer; neurological disease; Huntington disease; spinocerebellar ataxia; viral disease; ADDS; hepatitis C virus; HCV; ss.
inhibit hepatic glucose production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocerobellar ataxia) or viral disease (e.g., MDS). This sequence represents a hepatitis C virus (HCV) antisense oligonucleotide that can be used to control HCV gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                              The invertion describes a kNA interferce (kNA) agein (1) computating a sense sequence and an antiseanse sequence, where the sense sequences have one or more asymmetrical 2.0 alkyl modifications, the antiseanse cone or more asymmetrical phosphorothioate modifications and the antiseanse sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (1); reducing (M1) apoB-100 care: a pharmaceutical preparation comprising (1); reducing (M1) apoB-100 care: a pharmaceutical proparation comprising (1); producing (I); the modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where controducing one or more asymmetrical modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where controdification decreasing (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.

The subject is suffering from a disorder characterised by elevated or otherwise unwanted aspression of apoB-100, elevated or otherwise unwanted clasores from the HDL/LDL cholesterol imbalance, disorder is chosen from the HDL/LDL cholesterol imbalance, disorder is chosen from the HDL/LDL cholesterol imbalance, or conary attery disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-matabolism-crelated disorder e.g. diabetes or for treating the diseases as mentioned above, cancer (e.g. breast, colon or treating the diseases as mentioned above, cancer (e.g. breast, colon or treating the diseases as mentioned elect.). Albab. This sequence represents a hepatitis C virus (HCV) antisense oligonucleotide that can control HCV gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cytostatic; anticonvulsant; notropic; muscula, anti-HIV;

The invention describes a RNA interference (IRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-0 alkyl modifications, the antisense consequence tasymetrical phosphorothioate modifications and the antisense sequence tasymetrical phosphorothioate modifications and the antisense sequence tasymetrical phosphorothioate modifications or more asymmetrical modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition for its use; and a device that can be dispense or administer a composition comprising (I). Iis useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or or cherwise unwanted expression of apoB-100, elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted consent from the Hub/LDL cholesterol imbalance, dispanse (GB) and atheroselerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for related disorder e.g. diabetes or type-2 diabetes. (I) is administered to a subject colon or creating the diseases as mentioned above, cancer (e.g. breast, colon or creating the diseases as mentioned above, cancer (e.g. breast, colon or creating the diseases as mentioned elevel. (e.g., Huntington disease or ginnocrebellar ataxia) or viral disease (e.g., Huntington disease or general control of the proper decreased or elevel control of the proper decreased or elevel 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                      for recovery of cells or clumps of cells, especially pancreatic islets or tumour cells. The tumour cells can be modified ex vivo and then returned to the patient (adoptive immunotherapy). After tissue degradation, the cells or clumps of cells are separated by centrifugation and on density gradients. The protease is produced by recombinant techniques. Primers used for manipulation of the protease coding sequence were synthesised based on peptide fragments of the protease. The primers are described in AAT32287-96. This primer was used to amplify a 320 base pair partial sequence of the protease coding sequence which was then used for sequence
                                                                                                                                                                                                                                                                                                                                                                                                                        The neutral protease of Clostridium hystolyticum is used to digest tissue

This single and eclecide polymorphism (SNP) is a C at position 463 of the TPMT gene, and results in a KilyT amino acid substitution (see ABR63163) in the TPMT protein. It is one of six newly identified SNPs in the TPMT gene, protein. It is one of six newly identified SNPs in the TPMT gene that lead to low TPMT activity. A polymuclectide comprising the present sequence (sense or complementary strand) is claimed. Polymorphic TPMT polymorphicase, antibody and modulator compounds can be used to prepare pharmaceutical compositions for diagnosing or treating a TPMT-associated diseases, or a susceptibility to such a disease, e.g. thiopurine-induced toxicity, myelosuppression (pancytopaenia) and gastrointestinal disturbances, leukopaenia, thrombocytopaenia, or anaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New thiopurine S-methyltransferase (TPMT) polynucleotide, useful for preparing diagnostic and pharmaceutical compositions for diagnosing and treating a TPMT-associated disease, e.g. leukopenia, thrombocytopenia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human transcription termination factor binding protein 54 PCR primer 2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for the recombination of nucleic acid (NA) templates. The method comprises: (a) providing at least two acid (NA) templates. The method comprises: (a) providing at least two their sense strands; (b) contacting the templates with at least one each of forward and reverse primers that anneal, respectively, only to the 31-region of the antisense strand of T1 and to the 31-region of the sense strand of T2; (c) extending the primers by no more than 1000 nucleotides (nt); (d) separating extended primers from their templates; (e) reannealing the extended primers, to either template; and (f) repeating cycles of steps (b)-(e) until at least one full-length extension product, e. a recombination of T1 and T2, is obtained. Also described: (l) a method starting from at least one each of antisense and sense singlement canded templates; (2) generating a recombined polypeptide (1) with altered properties by expressing recombination products of the new
                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombination of nucleic acid templates, useful e.g. for producing enzymes with altered properties, is based on cyclic extension of unpaired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rhodosporidium mutant TAL enzyme 3' region oligonucleotide SEQ ID NO:201.
                Human transcription termination factor binding protein 54 as one new kind of polypeptide and polynucleotides encoding this polypeptide.
                                                                                                 The invention relates to human transcription termination factor binding protein 54 useful in treating various diseases, such as malignant tumour, nosobaemia, HIV infection, immunological diseases and inflammations. The present sequence is that of a human transcription termination factor binding protein 54 PCR primer of the invention
                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic acid template; recombined polypeptide;

The present invention describes a mouse (I), homozygous for a disruption in the alpha-L-iduronidase (IDUA) gene but with normal expression of the in the alpha-L-iduronidase (IDUA) gene but with normal expression of the hepatic sulphate transporter SAT-1 gene. (I) is used to evaluate the alpha described with iduronidase deficiency. (I) may also be used to pathology associated with iduronidase deficiency. (I) may also be used to pathology associated with iduronidase deficiency. (I) may also be used to specific tissue or organ in the mouse using the same techniques. Targeting systems which may be tested using this regime include a target. Targeting systems which may be tested using this regime include a target includase. (I) may also be used as a general model for studying the iduronidase. (I) may also be used as a general model for studying the pathology of MPS I. The SAT-1 gene overtiaps with the IDUA gene but in (I) pathological effects observed in (I) are due solely to the disruption of the IDUA gene. The present sequence represents a IDUA genemic DNA
                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New transgenic mouse, useful for modeling lysosomal disorders and testing cell- or tissue-specific targeting systems.
processes and screening the polypeptides formed for properties different from those of polypeptides from either of the templates; and (3) (1) produced by method (2). The methods are useful for the recombination of nucleic acid templates of interest, and generation of a recombined polypeptide having altered properties. The method can be used to make combined genes that express proterins e.g. enzymes, cytokines, growth factors, viral proteins or microbial antigens with altered properties, e.g. stability, activity or specificity. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Murine; mouse; alpha-L-iduronidase; IDUA; hepatic sulphate transporter; SAT-1; mucopolysaccharidosis type I; MPS I; transganic mouse; cell.specific targeting system; tissue-specific targeting system; lysosomal disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel human zinc finger protein 27.50, and the polymuclootide encoding it. The polypeptide is useful for treating several diseases, such as solid tumour, nervous system disease, malignant disease of blood, development disturbance and HIV infection. The sequence represents a PCR primer used in example 3 of the invention

Kringle protein 14 and encoding polynucleotide, used in diagnosis and treatment of malignant tumors, hemopathy, human immunodeficiency virus infection, immunological diseases and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated polypeptide (I) of Kringle proteit 14 and the polypuclectide (II) encoding (I). (I) and (II) are used in diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The present sequence represents a reverse transcriptase (RI)-PCR primer used to isolate the coding sequence of kringle protein 14 as described in the invention
antiinflammatory; malignant tumour; haemopathy; inflammation; primer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a method of typing (M1) a gene (I) that has one or more polymorphic microsatellite loci (PML). The method comprises: PCR amplification of at least one DNA region of (I) that includes PML, using as template a DNA sample containing at least one segment of (I); and determining the length of the resulting amplicon(s). Also described are: a method of determining (M2) microsatellite markers (WM) for predisposition to a disease, associated with a gene that includes one or more PML, and predisposis (M3) of diseases associated with gene that include PML. The method is used to identify microsatellite markers, in a disease-related gene, that are associated with a predisposition to
                                                                                          The invention relates to human protease regulatory protein 28.27, the polynucleotide encoding it, the process for preparing the polypeptide by DNA recombinant technology, the application of the polypeptide in treating diseases (e.g. cancer, HIV infection), an antagonist of the polypeptide and its medical function and the application of the polynucleotide. The present sequence is that of a human protease regulatory protein 28.27 PCR primer useful in examples of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Typing genes that contain polymorphic microsatellite loci, useful for identifying predisposition to disease, by amplification and determining length of amplicons.
   Polypeptide human proteinase regulatory protein 28.27 and polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prion protein polymorphic microsatellite marker consensus sequence #30.
                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene typing; polymorphic microsatellite loci; PML; disease; disease predisposition; microsatellite marker; prion disease; cystic fibrosis; malignant hyperthermia syndrome; metabolic disease; milk protein; hormone; transcription factor; pT7-blue-vector; sheep;

The nucleic acid molecules of the invention are useful for identifying compounds that modulate wild-type rat KDR activity to evaluate the safety and efficacy of specific inhibitors of KDR in rats. KDR inhibitors are useful for treating cancer, ischaemic ocular diseases such as proliferative retinopathy and inflammation. The present sequence is a reverse transcription (RT) PCR primer used for cloning rat KDR cytosolic domain. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                             ö
diseases and for prediagnosis of such diseases, especially prion diseases but also cystic fibrosis, malignant hyperthermia syndrome in pigs and metabolic diseases; also to type genes that encode milk proteins, hormones or transcription factors. The method is simpler, quicker and particularly less expensive than known methods based on sequencing. This sequence represents a prion protein polymorphic microsatellite marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecules encoding rat KDR protein, useful for identifying inhibitors of KDR activity for treating cancer, ischemic ocular diseases, and inflammation.

PCR primers AAA63751-52 were used to amplify a murine cDNA sequence encoding a neutral endopeptidase metallopeptidase (NEP)-like polypeptide, designated NL-1. The specification also describes NL-2 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used to promote production and secretion of foreign protein and active biopeptides, using chimeric constructs containing the foreign protein adventagem from and in phase with the N-terminal region. The N enzymes are have been localised to the brain, and may be useful in the treatment of neurological diseases such as Alzheimer's disease, pain, and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to creat bone diseases, and any be used to treat bone diseases, and any be used to improper peptide processing by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a signal amplification method (M1) for detecting expressed gene using reverse transcription reaction and a self-assembly reaction of forming a self assembly of oligonucleotide probes, thus improving detection sensitivity of the expressed gene in a DNA chip. (M1) is useful for aignal amplification method (M1) for detecting expressed gene (claimed). (M1) improves detection sensitivity of the expressed gene in a DNA chip (claimed). (M1) does not require use of expressive enzymes and enables detection corresponding to the original RNA length oxpression amount because of using naither linear amplification nor PCR. This sequence corresponds to a nucleotide used in the method of the

The present invention relates to a method for sorting genes. The method comprises producing first double stranded (ds) cDNA from mRNA by reverse transcription using a poly-T primer. The ds cDNA is then digested with a restriction enzyme that generates cohesive ends with overhanging single correction enzyme that generates cohesive ends with overhanging single stranded sequence containing a constant number of nucleotides, and the digestion products are ligated to a set of ds DNA oligonucleotide and adaptors. Each adaptor has at one end, a sequence complementary to a cossible overhang and the other end a primer-template sequence specific for the adaptor complementary sequence, and between these two ends the amplified in separate PCR says, using for each a primer that anneals to solyr and a second primer, from a set that anneals to the cDNA specific polyr and a second primer, from a set that anneals to the cDNA specific copyramer-template sequences. Amplicons are finally sorted into noncredundant groups defined by the specific primer that annealed to the primer-template sequence and thus primed PCR. The method is useful for primer-template sequence and thus primed PCR. The method is useful for cevery expressed-gene transcript in the original sample is represented by its own subgroup. The method is also useful for isolation, indentification can analysis and diagnosis of diseases, for studying coll differentiation and in gene therapy. The present sequence was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; salivary gland; stem cell; hSGSC; CD49f-positive; differentiation; liver; pancreas; nestin-positive cell; albumin-positive cell; insulin-positive cell; glucagon-positive cell; organ regeneration; organ transplant; hepatotropic; Pdx-1; reverse transcription-PCR;
                                                                                                                                     Sorting genes into non-redundant groups, useful e.g. for gene isolation, diagnosis and in gene therapy, by amplifying cDNA fragments attached to selective adaptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to an isolated CD49f-positive adult human salivary CC gland stem cell (hSGSC) which is capable of differentiating into cells characteristic of various organs such as the liver or pancreas when cultured in vitro. Specifically, the hSGSCs are capable of differentiating into nestin-positive and albumin-positive cells, insulince differentiating into nestin-positive and albumin-positive cells, insulince the differentiated cells produced from MSGSCs; methods of inducing differentiation of hSGSCs into nestin-positive/albumin positive, insulince of a fibroblast growth factor, epithelial cell growth factor and cells produced in the presence of a fibroblast growth factor, epithelial cell growth factor and cells was an in the presence of epithelial cell collawary gland and culturing them in the presence of epithelial cell companies. The regenerated organs eliminate transplant rejection, as the stem cells used to produce the organs are taken from the patient.

CC squences ADR32209-ADR32230 represent reverse transplant rejection, as the prime used to analyse gene expression in hSGSCs in an example of the

                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a primer for the PCR amplification of rat
cerebellum derived growth factor 1 (CDGF1) cDNA. CDGF can be used to
screen for modulators of CDGF binding to erbB type receptors.
Identification of a modification or mutation in a CDGF gene, or aberrant
carpession of a CDGF gene or levels of soluble CDGF may be used to
indicate the risk of unwanted cell proliferation or differentiation. CDGF
may be used to induce neuronal differentiation in stem cell culture, and
maintain the integrity of a terminally differentiated neuronal cell
culture, e.g. useful for intracerebral grafting to alleviate behavioural
defects. CDGF may also be used in nerve protheses to repair central and
peripheral nerve damage, especially where a crushed or severed axon is
culture, the central for peripheral nervous system, to treat
cell survival in the central or peripheral nervous system injury, e.g.
traumatic, chemical or vesal injury and deficits such as ischaemia
cell survival metrodescentative disease including Parkinson's and Huntingdon's,
amylotrophic lateral sclerosis, spinocerebellar degeneration, chronic
chronic neurodegenerative disease including multiple sclerosis,
disporders of the sensory neurons and degeneration, e.g.
CDGF may also be used to treat neoplastic or hyperplastic
cransformations, particularly of the central nervous system, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ribozyme; hairpin; hammerhead; gene therapy; vasotropic; restenosis; ss.

                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1.

Representative examples of ribozyme recognition sites are given in AAA82415 to AAA68797. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells. The ribozyme is resistant to endonuclease activity and hence is efficient in
                                                                                                                                                  New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1, PCNA and Cyclin B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1) 13%; Score 17.4; DB 1; Length 19; larity 94.7%; Pred. The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a ribozyme (I) which cleaves RNA encoding a cytckine involved in inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule (II) comprising a promoter operably linked to a nucleic acid segment encoding (I). (I) can have antipsoriatic, antisickling, christoportheic, antidiabetic, antisickling, ophthalmological, cytostatic, antisebortheic, antidiabetic, antisickling, ophthalmological, vulnerary, keratolytic and virucide activities, and is seen therapy. (I) and (II) are useful for treating proliferative skin diseases such as psoriasis, atopic dermatitis, actinic keratosis, squamous or basal cell carcinoma and viral or sebortheic wart. They can also be used for treating proliferative eye diseases such as diabetic retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of prematurity and retinal detachment, and for treating and preventing scarring such as keloid, adhesion and hypertrophic or hypertrophic burn car and such as the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to von Willebrand factor. The present sequence represents a primer used in the methods of the present invention

The compound of the invention demonstrates antiarteriosclerotic, cardiant, antidiabetic and anorectic activities and may be useful for preparing a composition for treating abnormal lipid or cholesterol metabolism, atherosclerosis, diabetes Type 2, obesity, hyperlipidaemia or cardiovascular disease. Furthermore, the compound has gene therapy applications. The current sequence is that of the 2.0-omethoxyethyl (2.90) phosphorothioare backbone throughout and in which all cytidine residues

The invention relates to a novel antisense compound where the compound hybridises to and inhibits expression of mRNA encoding human apolipoprotein B (App8) after 16-24 hours by at least 30% in 80% confluent HepG2 cells in culture at a concentration of 150 nM. The compound of the invention demonstrates cardiovascular, the confluent HepG2 cells in culture at a concentration of 150 nM. The compound of the invention demonstrates cardiovascular, the cardiant, vasotropic, hypotensive, anabolic, eating disorder-related, cytostatic, vasotropic, hypotensive, anabolic, eating disorder-related, cytostatic, che useful for inhibiting the expression of apolipoprotein B in cells or tissues in vivo in order to address a condition associated with abnormal lipid or cholesterol metabolism. The compound may be useful for cholesterol metabolism. The compound may be useful for cholesterol levels, lipid levels, tatty acid levels, acute phase cholesterol levels, lipid levels, tatty acid levels, acute phase reactants and chylomicrops and thus may be utilised during treatment of hyperipoproteinnemia, hypertlipidaemia, hyperthyroidism, hypertension, cardiovascular disorders, Von Gierk's disease, lipodystrophy, cardiovascular disorders, Von Gierk's disease, lipodystrophy, candiovascular acidiotic dwarfism, hyperthyroidism, hypertension, impotence, obstructive liver disease, Altheimer's disease, dementia, chapters of antisense 2' MDS (2'-methoxyethyl) gapmer oligo of the invention which is
                                                                                                                                            apolipoprotein B, ApoB, cardiovascular, antiarteriosclerotic, antidiabetic; anorectic, cardiant; vasotropic; hypotensive, antabolic; eating disorder; cytostatic; endocrine; vasotropic; hypotensive, neuroprotective; noctropic, lipid; cholesterol metabolism; hyperlipoproteinaemia, hyperlipidsemia, hypercholesterolaemia; hyperlipoproteinaemia, hyperlipidsemia, hypercholesterolaemia; sexual atcliotic darfigm; hyperthyroidism; hypertension; sexual atcliotic darfigm; hyperthyroidism; hypertension; anorexia nervosa; Werner's syndrome; hepatoma; multiple myeloma; uraemia; impotence; obstructive liver disease; Alzheimer's; dementia; diabetes; obesity; atherosclerosis; antisense; 2'-MOE gapmer; 2'-methoxyethyl wing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "OTHER = Phosphorothioate backbone, bases 1-5
16-20 2'-MOE wing bases, all cytidine residues are 5-
methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antisense oligonucleotide compound that inhibits expression of mRNA encoding human apolipoprotein B, useful for treating hyperlipidemia, diabetes, obesity, von Gierke's disease, lipodystrophies, Cushing's
                                                                                                          Antisense 2'-MOE gapmer oligo targeted to rabbit ApoB - SEQ 850
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Dobie KW;

The present sequence is that of a single mismatch target sequence for a molecular beacon comprising an oligonucleotide probe (see ABL57069) covalently attended at the 3' end to fluorescent dye and at the 5' end to a nanoparticle. In the native state, the probe forms a hairpin conformation with hybridised termini. The probe forms a hairpin and quencher (gold nanoparticle) in the molecular beacon results in little or no detectable fluorescence upon hybridisation of the central complementary stretch of the probe to a target sequence, such as the present sequence, the hairpin undergoes a conformational change resulting in an increase in fluorescence, the extent of which is proportional to the amount of target sequence present. Experiments with the present sequence and a perfectly-matched target (see ABL57071) showed that sequence and a perfectly-matched target (see ABL57071) showed that change the proportion and conformation for the use of metal surface quenchers such as particles or films for high sensitivity applications in, for example, detection and

The DNA primer is used with primers AAQ92370-77 in the reverse transcription-polymerase chain amplification of alpha- lactalbumin from MA104 cells and topoisomerase-IIa from Jurkat cells. Amplification is carried out using DNA-polymerase Ifil from Thermus fillformis (AAR76060) (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New heat-stable DNA polymerase from Thermus filliformis - has reverse transcriptase activity in the presence of magnesium ions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the use of acylated aminopropane diols and their analogue (I), their optical and geometric isomers, racemates, salts, and mixtures in pharmaceutical compositions for the treatment of pathological states in which there is lipid or carbohydrate metabolism disturbance, inflammation, and/or cell differentiation or proliferation disturbance. The compounds are useful for the treatment of lipid and carbohydrate metabolism disorders such as syndrome X, diabetes, atherosclerosis and obesity, inflammatory disorders such as atherosclerosis, allergies, asthma, eczema, psoriasis, and itching, and cell proliferation and differentiation disorders such as carcinogenesis. In an example of the invention, the effectiveness of the compounds to activate peroxisome proliferator-activated receptor (PPAR) genes was tested by gene analysis using PCR. This sequence represents a primer used in the PCR analysis.

including autoimmune diseases, degenerative nervous system diseases, graft versus host diseases, hypersensitivity diseases, infectious diseases and neoplastic diseases. Autoimmune diseases include Addison's diseases, atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those manifested in leprosy. Infectious diseases include viral infections caused by viruses such as HIV, fungal infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by wichselve and bacterial infections such as those caused by Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
                                              Kit for diagnozing and treating T-cell associated diseases e.g. autoimmune, degenerative nervous system and infectious disease, comprises nucleic acid primers specifically priming and allowing amplification of a Vbeta gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                breast. The present sequence represents a Vbeta gene repeat sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acid obtained from 4 synthesis-period of neuroblastoma cells useful for prognosing and determining progress stage of
                                                                                                                                                                                                                                              The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4 synthesis-period of neuroblastoma related primer, SEQ ID 324.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                           This invention relates to the human FD23 protein and the CDNA sequence encoding it. Included in the invention is a vector containing a FD23 encoding polynucleotide, a host cell containing the vector, and an antibody directed against FD23. Both the FD23 protein, and CDNA encoding it can cause cytostatic, haemostatic, virucide, immunomodulatory or amitinfilmmatory activity, when used in the diagnosis and treatment of malignant tumours, haemopathy, HIV infection, immunological disease and various inflammatory conditions. The present sequence represents a PCR
                                                                                                                                                                                             Human FD 23 and encoded polynucleotide, used in diagnosis and treatment of malignant tumors, hemopathy, human immunodeficiency virus infection, immunological diseases and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       degenerative nervous system disease; graft versus host disease; hypersensitivity disease; infectious disease; neoplastic disease; Addison's disease; atrophic gastritis; degenerative nervous system disease; multiple sclerosis; Alzheimer's disease; hypersensitivity disease; type I hypersensitivity; Goodpasture's syndrome; type II hypersensitivity; Goodpasture's syndrome; type IV hypersensitivity; leprosy; infectious disease; viral infection; HIV; fungal infection; Candida; parasitic infection; schistosome; filaria; bacterial infection; Mycobacterium; neoplastic disease; lymphoproliferative disease; leukaemia; lymphoma; cancer; brain cancer;

neuroblastomas.

```
Analyzing a target nucleic acid sequence in a biological material by real time PCR using nucleic acid primers that are separated by at least 750 nucleic acid residues in the target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for analysing a target nucleic acid sequence in a biological material. The method comprises adding at least two nucleic acid primers that hyportalise under stringent conditions to predetermined nucleic acid sequences of the target nucleic acid sequence that are separated by at least 750 nucleic acid residues, amplifying the target nucleic acid sequence by FCR, and detecting and quantifying the target nucleic acid sequence. The methods and compositions of the present invention are useful for analyzing a target nucleic acid sequence. The methods and a target nucleic acid sequence in a biological material by real time PCR using nucleic acid primers that are separated by at least 750 nucleic acid residues in the target sequence. This polynucleotide sequence represents
                                                   The present invention relates to human nucleic acid sequences (I; ADO15739-ADO15912) obtained from 4 syntheeis-period (stage 4S) of neuroblastoma cell. (I) is useful for prognosing and determining the progress stage of 4 synthesis-period of neuroblastoma. The present sequence is a primer, used to illustrate the invention.
                                                                                                                                                                                                                                          Gaps

The invention relates to a method of determining (MI) level of potentially active biological pathogens in biological material, involves contentially active biological pathogens in biological material, adding at least two nucleic acid sequences by PCR, and detecting and and annihitying target nucleic acid sequences by PCR, and detecting and annihitying target nucleic acid sequences, where quantity of the nucleic contential acid sequences is proportional to number of biological pathogens in a biological material such as cells, active biological pathogens in a biological material such as cells, tissues, blood or blood components, proteins, enzymes, immunoglobulins, tissues, blood or blood components proteins, enzymes, immunoglobulins, common material such as cells, active biological pathogens in a biological material such as cells, come marrow, heart valves, cartilage, corneas, arteries, veins, organs, come marrow, heart valves, cartilage, corneas, arteries, veins, organs, come marrow, heart valves, cartilage, corneas, arteries, veins, organs, come marrow, heart valves, calls for transplantation, red blood cells, white companies of the content of Langerhaus cells, corneas, fungi and single cell parasites. The biological parasites is chosen from Aspergillus, Candida, Histoplasma, Campylobacter, Helicobacter, Brucella, Haemophilus, Salmonella, Cirrobacter, Bencella, Haemophilus, Salmonella, Cirrobacter, Bencella, Haemophilus, Salmonella, Cirrobacter, Cantifornia encephalitis virus, Cornavirus, Coxsackievirus-B, Eastern equine encephalitis (Virus (HEV), Hepatitis G virus (HOV), Hepatitis C virus (HOV), Hepatitis C virus (HOV), Hepatitis C virus, Rabies virus, Merspiratory Syncytial virus, Rabies virus, Rabies virus, Merspiratory Syncytial virus, Coxtuse of virus, Rabies virus, Rabies virus, Adenovirus, Western equine encephalitis virus, Western equine encephalitis virus, Western equine encephalitis virus, Western equine encephalitis virus, Cytomegalovirus, Cytomegalovirus, Cytomegalovirus, Cytomegalovirus, Cytomegalo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determining level of potentially active biological pathogens in
biological material, by adding nucleic acid primer pairs to biological
material, amplifying target nucleic acid by PCR, detecting and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vector-specific primer SK-Zap (T66995) was used with primer T50-pr1 (T66994), based on a GenBank sequence expressed sequence tag, to amplify CDNA from a human Jarkat library. A Ced3-interleukin-1- beta converting enzyme (ICB)-like partial cDNA clone was identified. This was used to rescreen the library, leading to the isolation of cDNA clones (T66992-93) for novel apoptotic cysteine protease Mch3-alpha (W15262) and Mch3-beta (W15263)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New gene encoding Mch3, a cysteine protease that regulates apoptosis - for treating human diseases associated with apoptosis, and screening for antagonists and agonists of Mch3.

This sequence represents a primer for the Mch4 and Mch5 genes of the Invention. Mch4 (see AAW23790) and Mch5 (see AAW27391) are members of the Aspartic acid specific Cys protease family involved in cell apoptosis. The genes and proteins can be to diagnose, treat or reduce the severity of diseases resulting from increased cell survival, e.g. hormone dependent tumours such as breast, prostate or ovarian cancers, or autoimmune diseases, such as systemic lupue erythematosus or immunoglobulin mediated glomerulomephritis, diseases resulting from decreased cell survival, e.g. degenerative diseases such as Alzheimer's or Parkinson's disease, or amyotrophic lateral sclerosis or other diseases associated with increased apoptosis such as aplastic ansemia, stroke, ischaemic injury following myocardial infarction or reperfusion injury. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
Aspartic acid specific cysteine protease(s) Mch4 and Mch5 - which are involved in cell apoptosis, useful to diagnose and treat, e.g. cancer, autoimmune, Alzheimer's or Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Сарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present PCR primer was used to amplify Mch6 cDNA. Mch6 is a ced-3 chomologue, and is a member of the ICE (interleukin-1-beta converting converse) family of aspartate-specific cysteine proteases (ASCPS). The caryome) family of aspartate-specific cysteine proteases (ASCPS). The cappounds identified by the modulators (inhibitors or enhancers). The compounds identified by the compounds in solvers, in a large in a large in a large in a large in a solver in as a large in a solver in a pastic anemia, ischemic injury including myocardial infarction, stroke aplastic anemia, ischemic injury including myocardial infarction, stroke compounds are also useful for treating compounds and hormone dependent tumours such as breast, compounds and hormone dependent tumours such as breast, compounds and infarction and infarction and infarction and immune-mediated glomerulonephritis as well as viral infarction are useful for treating these conditions. The Mch6 inhibitors are useful for treating these conditions. The Mch6 inhibitors are useful for treating these conditions. The Mch6 inhibitors are useful for treating these conditions. The Mch6 inhibitors are useful for treating these conditions. The Mch6 inhibitors are useful for treating these conditions.

```

```
The invention relates to an isolated gene encoding MCH6 (mammalian ced-3 chomologue 6) an aspartate-specific cysteine protease and the MCH6 homologue 6. The MCH6-encoding nucleic acids and polypeptides can be used to diagnose, treat (e.g. by gene therapy) or reduce the severity of cell ceath-mediated diseases (i.e. apoptotic) such as neurodegenerative diseases e.g. Alzheimer's disease, Parkinson's disease, amyotrophic collateral sclerosis, retinitis pigmentosa and cerebellar degeneration, and myelodysplastic syndromes, e.g. aplastic anaemia, ischaemic injury, compocardial infarction, stroke and reperfusion injury. The MCH6-encoding nucleic acids and polypeptides can also be used to diagnose or generate correspents to diagnose diseases mediated or characterised by programmed cell death. A purified recombinant MCH6 protein can be used to measure thydrolysis rates for various substrates such as DEVD-AMC and YVAD-AMC in a continuous fluorometric assay. The present sequence is a PCR primer consequence to isolate the cDNA encoding human MCH6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                           Aspartate-specific cysteine protease; MCH6; ss; nootropic; neuroprotective; anti-Parkinsonian; antianaemic; vasotropic; cardiant; cerebroprotective; mammalian ced-3 homologue 6; gene therapy; apoptosis; Alzheimer; disease; Parkinson's disease; retinitis pigmentosa; cerebellar degeneration; myelodysplastic syndrome; aplastic anaemia; ischaemic injury; myocardial infarction; stroke; reperfusion injury; amyotrophic lateral sclerosis; PCR primer; T3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Mch6 polypeptides and genes encoding the polypeptides useful for diagnosing, treating or reducing the severity of cell death-mediated diseases such as neurodegenerative diseases e.g. Alzheimer's disease. Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

The present PCR primer was used to amplify DNA encoding an apoptotic procease, designated Mch6. Mch6 is an apartate-specific cysteine protease, mch6 polypeptides and polynucleotides can be used to diagnose, treat or reduce the severity of cell death-mediated conditions, e.g. cancers, autoimmune diseases such as systemic lupus erythematosus, viral infections such as herpesvirus, degenerative disorders such as Alzheimer's disease and Parkinson's disease, myelodysplastic syndromes such as myocardial infarction and stroke. They can also be used to screen
                                                                                                   Human, apoptotic protease, Mch6, aspartate-specific cysteine protease, cell death; cancer, autoimmune disease, systemic lupus erythematosus; viral infection, degenerative disorder, Alzheimer's disease;
                                                                                                                                                                  Parkinson's disease; myelodysplastic syndrome; myocardial infarction; stroke; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated gene encoding a human apoptotic protease known as Mch6, usefin the diagnosis or treatment of cell death-mediated conditions, e.g. cancers and autoimmune diseases such as systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cardiant; apoptosis modulator; aspartate-specífic cystéine protease; gene therapy; aspartate-specífic cystéine protease agonist; asparente-specífic cystéine protease ancagonist; Moh6; mammalian ced-3 homologue f, apoptosis; cancer; viral infection; degenerative disorder; Alzheimers disease; Parkinsons disease; myocardial infarction; human; mammalian ced-3 homologue 6; Mch6; PCR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; virucide; nootropic; neuroprotective; antiparkinsonian;
                                                            Primer for DNA encoding aspartate-specific cysteine protease Mch6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for compounds that inhibit or promote Mch6 mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 17; DB 1; Length 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated gene encoding apoptic protease, mammalian ced-3 homologue 6 (Mch6). Mch6 is a member of the aspartate-specific cysteine protease (ASCP) family. Mch6 DNA and protein sequences are useful for modulating apoptosis for the therapeutic treatment of human diseases. Mch6 sequences are useful for upregulating apoptosis (e.g. for treating or viral infections) or downregulating apoptosis (e.g. for treating Alzheimer's disease. Parkinson's disease or cerebellar degeneration). The Mch6 sequence is mediated diseases, as well as other diseases mediated by either increased or decreased programmed cell death. The present sequence is a primer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                The invention describes an isolated gene (I) encoding Mch6 (mammalian ced -3 homologue 6), or a functional fragment of it. (I) And the polypeptide encoded by (I) is used to modulate apoptosis for the therapeutic treatment of human diseases. (I) Is used to prepared a recombinant aspartate-specific cysteine protesse, that it encodes. The recombinant protesse can be used to screen for Mch6 inhibitors. Dissorders involving apoptosis that can be disagnosed or treated by (I) or the polypeptide it encodes, including cancers, viral infections, degenerative disorders, such as Alzheimers and Parkinsons disease, and mycardial infarction. This sequence represents a primer used in the isolation of human mammalian ced-3 homologue 6 (Mch6), a member of the aspartate-specific cysteine protesse (ASCP) family of protesses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic; cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; kNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; diabetes; cancer; breast cancer; slung cancer; lung cancer; always ancer; breast cancer; spinocerebellar ataxia; viral disease; AIDS; hepatitis C virus; HCV; ss.

The invention describes a RNA interference (IRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (I); involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where contrity, a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). Is captuit for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or cherwise unwanted expression of apoB-100, elevated or otherwise unwanted cypression of apoB-100, coronary heart disease (CHD) and atherosclerosis (I) is administered to a subject to disease (CHD) and atherosclerosis. (I) is administered to a subject to cinhibit hepetic glucose production or for treating glucose-metabolism.

Creating the diseases as mentioned above, cancer (e.g., breast, colon or related disorder e.g. diabetes or type-2 diabetes. (I) is useful for related disorder e.g. diabetes or type-2 diabetes. (I) is useful for cancer in accer, in the control HCV gene expression.

Creating the described or control HCV gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Interference RNA agent useful for treating dyslipidemias, coronary disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

This invention describes a novel antisense compound (I) 8-30 nucleobases in length targeted to a polynucleotide encoding human telomeric repeat binding factor 2 (II) which specifically hybridizes with, and inhibite the expression of (II). (I) is useful for treating a human having a disease or condition associated with (II) such as premature aging or a hyperproliferative disorder especially cancer, by inhibiting the expression of (II) in human cells or tissues. (I) is useful for disagnostics, therapeutics, prophylaxis and as research reagents and kits. The products of the invention have cytostatic activity. This sequence represents an antisense oligonucleotide used to illustrate the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense compounds targeted to nucleic acid encoding telomeric repeat binding factor 2 useful for treating conditions such as premature aging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             p53 protein; cell cycle control; apoptosis; oesophageal tumour; pancreatic tumour; colorectal tumour; renal cell carcinoma; cervical carcinoma; cancer; p21 promoter; ss.

The invention relates to a method (M1) of identifying compounds that condulate the binding of pi3 protein to a gene of interest, involving providing the gene of interest as chromatine assembled DNN, contacting the gene of interest as chromatine assembled DNN, contacting the determining whether the presence of the test compound, and etermining whether the presence of the test compound modulates the binding of the p53 to the gene of interest. Also described are the cancer cells, which involves providing a gene construct comprising a chromatin assembled p21 promoter linked to a reporter gene, where the presence of p53 protein, incubating the gene construct by measuring control of the p53 protein, incubating the gene construct by measuring protein and a test compound, and determining whether the trest compound increases binding of the p53 protein to the gene construct by measuring control of p53 protein with a transcription cofactor that associates interesting the gene activity in the presence and absence of the creat compound; (2) Identifying a test compound that modulates the control of p53 protein with a transcription cofactor that associates with p53 protein when p53 protein is bound to a gene of interest, which involves providing the gene of interest with the p53 protein, the transcription cofactor, and the test compound, and determining whether the presence of the test compound modulates the association of the contacting the gene of interest with a cell nuclear comprises to protein the actl cycle control gene of interest with a cell nuclear. The gene of interest with a cell cycle control gene or an apoptotic gene. The p53 protein is a full-length p53 protein or p53 protein that is a full-length p53 protein or p53 protein that is a full-length p53 protein or p53 protein that is a full-length p53 protein or p53 protein that is a full-length p53 protein or p53 protein that is a full-length p53 protein or p53 protein that is a full-length p53 protein with a cell cycle control gene of interest with a cell cycle co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying compounds that modulate binding of p53 protein to gene, by providing gene as chromatin-assembled DNA and contacting with protein and test compound, and determining whether compound modulates binding of p53.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 1; SEQ ID NO 7; 20pp; English.
                                                                                                                                                                                                                                                                                                 24-MAR-2003; 2003US-00397131
                                                                                                                                                                                                                                                                                                                                                                                                      22-MAR-2002; 2002US-0366897P.

```
The invention relates to a compound targeted to a nucleic acid molecule encoding human phosphoinositide-3-kinase (P13K) regulatory subunit 4, p150. The compound is an antisense olisjonucleotide that specifically hybridises with a nucleic acid molecule encoding P13K regulatory subunit 4, p150 and inhibits expression of the polypeptide. The antisense olisjonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of P13K regulatory subunit 4, p150 and for preventing or treating hyperproliferative disorders and cancer), Chediak-Higashi syndrome, neurodegenerative disorders and metabolic disorders. These may also be used in research and diagnostics and in preventing or delaying infection or inflammation. This sequence represents an antisense oligonucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Jagged peptides for inhibiting differentiation of progenitor cells - also used for maintaining these cells in undifferentiated state, e.g. for haematopoietic reconstitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This nucleotide sequence comprises the intron 10-exon 11 boundary of the human JAGGED1 gene. 47 Intron/exon boundaries have been defined (see AAX06701-47) by comparison of genomic sequences from bacterial artificial chromosome 49D9 and an isolated cDNA clone (see AAX05753). Exon 11 corresponds to nucleotides 1762-1808 of the hJAGGED1 cDNA. hJAGGED1 (see also AAW87994) is a Notch ligand capable of inhibiting the differentiation of haemacopoietic progenitor cells. Mutation of the hJAGGED1 gene is associated with Alagille syndrome. The Jagged1 gene has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Agrobacterium tumefaciens NT1130; 1,5-anhydroglucitol dehydrogenase; 1,5-AGDH; detection; diabetes; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel antisense oligonucleotides which specifically hybridises to and inhibits the expression of human phosphoinositide-1-kinase, regulatory subunit 4, p150. The plantine oligonucleotides comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-0-methoxyethyl sugar moiety. The antisense oligonucleotide further comprises at least one modified antisense oligonucleotide further comprises at least one modified can be used in diagnostics and as research reagents and kits. It can also be used prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. It can also be used to treat a disease
                                    antisense; inhibitor; hybridisation; human; phosphoinositide-3-kinase; regulatory subunit 4; p150; internucleoside linkage; phosphorothioate linkage; 2'-O-methoxyethyl sugar; 5-methylcytosine; infection; inflammation; tumour formation; hyperproliferative disorder; cancer; Chediak-Higashi syndrome; metabolic disorder; immunomodulator; cytostatic; gene therapy; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             or condition associated with phosphoinositide-3-kinase, regulatory abbunit 4, p150, e.g. hyperprolliferative disorder, preferrally cancer, Chediak-Higashi syndrome or a metabolic disorder. The products of the invention are immunomodulators with cytostatic activity and can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense compound targeted to a nucleic acid molecule encoding phosphoinositide-3-kinase, regulatory subunit 4, p150, useful for treating cancer, Chediak-Higashi syndrome or a metabolic disorder.

```
The invention, by towards a novel spacem to percunting traditions, that comprises a first solid support with a reactant of each reaction comprises on to it, and a second solid support either providing a second reactant confined to a specific area on the surface, or a chemical factorial reactant confined to specific, where the first and second solid supports are assembled to provide an environment for performing the reactions. In parallel. The methods and apparatus are useful for comprising a large number of chemical and blological reactions. Sequence variations, expression levels and their functions. The method is capable of generating large amounts of data or products per unit time by carrying out large numbers of reactions in parallel. The process is also menable to full automation. The present sequence represents a control probe used in detecting amplified products by allele specific extension, the products amplified by performing large numbers of PCR reactions using array-immobilised and releasable primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense oligonucleotide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipidemia, low high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antilipaemic; Cardiovascular; Analgesic; Antianginal; Antisense therapy; Human; Endothelial Lipase; dyslipidaemia; high density lipoprotein; HDL; cardiovascular disorder; metabolic syndrome X; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes the 1,5-anhydroglucitol dehydrogenase protein (1,5-AGDH) isolated from Agrobacterium tumefaciens. The 1,5-AGDH protein is useful as a detecting reagent for early stage diabetes. The present sequence represents a PCR primer for 1,5-AGDH, which is used in an example from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navi.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navi.3. The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeninal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy, or ataxia. The present but not limited a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target different regions of the human Navi.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense compound targeted to a nucleic acid molecule encoding about.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, selzure disorder such as childhood seizure disorder, or ataxia.
              The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

Also described are: a composition; inhibiting the expression of ESM-1 in cells or tisques; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; gene therapy; endothalial specific molecule-1; ESM-1; ESM-1; ESM-1 ESM-1 elated disorder; diabetes; cancer; ischaemia; reperfusion injury; angiogenic disorder; immunological disorder; cardiovascular disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense compound, having a sequence targeted to a nucleic acid encoding endochelial specific molecule-1 (ESM-1), useful for preparing composition for treating e.g., diabetes, cancer or cardiovascular disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "OTHER= phosphorothioate backbone. All cytidine residues are 5-methylcytidines"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense compound, having a sequence targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), useful for preparing a composition for treating e.g., diabetes, cancer or cardiovascular
nucleic acid ESM-1 and inhibits its expression. Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes, cancer, isothaemia or reperfusion injury, or angiogenic, immunological, cardiovascular or neurological disorder. This sequence represents an antisense oligonucleotide that can be used to modulate expression of endothelial specific molecule-1 (ESM-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; gene therapy; endothelial specific molecule-1; ESM-1; ESM-1; ESM-1 related disorder; diabetes; cancer; ischaemia; reperfusion injury; angiogenic disorder; immunological disorder; cardiovascular disorder; neurological disorder; antisense technology; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /mod_base= OTHER

              The invention describes a new antisense compound, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), that specifically hybridises with the nucleic acid ESM-1 and inhibits its expression. Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes, cancer, ischaemia or reperfusion injury, or angiogenic, immunological, earliowascular or neurological disorder. This sequence represents an antisense oligomucleotide that can be used to modulate expression of endothelial specific molecule-1 (ESM-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to polymorphic nucleic acid sequences encoding the very low density lipoprotein receptor (VLDLr) and methods of analysing a nucleic acid sample for polymorphisms. This method comprises obtaining a nucleic acid sample from one or more individuals, and determining the nucleotide occupying one or more of the polymorphic sites of one or more nucleic acid molecules. The method is useful for predicting the presence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Very Low Density Lipoprotein Receptor; VLDLr; cardiovascular disease; single nucleotide polymorphism; SNP; coronary heart disease; forensic; paternity testing; ss.
                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polymorphic nucleic acid sequences encoding the very low density lipportein receptor, useful for predicting the presence, absence or severity of a particular phenotype or disorder, e.g. cardiovascular disease such as coronary heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /*tag= a

A 181 bp product is obtained using this sense primer with the ancisense primer given in ACC57853. RT-PCR was performed in an example from the invention to determine expression profiles of MMP genes in human synovial cells in response to mechanical shear. A model-based analysis was used to identity the role of transcription factor binding motifs in gene regulation. The results provide an example of the method of the invention for determining expression levels of target genes based on sequence elements present in untranslated regulatory regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Predicting an expression level of a target gene or gene family comprises experimentally determining the number and type of cis-acting elements provided in 5' untranslated regulatory regions of the target gene.
absence or severity of a particular phenotype or disorder (e.g. cardiovascular disease such as coronary heart disease associated with a particular genotype. The nucleic acids containing the polymorphic sites may also be useful in forenatcs and paternity testing. Wild-type or variant nucleic acid molecules encoding VLDLr or wild-type or variant be used in the diagnosis and treatment of cardiovascular diseases and other diseases associated with VLDLr. The present sequence represents the coding sequence of VLDLr single

The present invention describes a set of nucleic amplification primers capable of amplifying a VH-JH or DH-JH IGH, VK-JK or VK/Intron-Kde IGK, Capable of amplifying a VH-JH or DH-JH IGH, VK-JK or VK/Intron-Kde IGK, Vbeta-Jbeta TCRB, VY-JY TCRG, Vdelta-Jdelta, Ddelta-Ddelta TCRD, rearrangement or delta-Ddelta TCRD rearrangement or comprises a forward primer and a reverse primer. Also described: (1) a comprises a forward primer and a reverse primer. Also described: (1) a comprises a forward primer; (2) detecting VH-JH or DH-JH IGH, VK-JK or VK/intron-Kde IGK, Vlambda-Jlambda IGL, Vbeta-Jbeta TCRB or Dbeta-Correcting thromosomal translocation (11:14) (BCLG-TCRD rearrangement; (3) detecting chromosomal translocation (11:14) (BCLG-TCRD rearrangement; (4) detecting chromosomal translocation (11:14) (BCLG-TCRD rearrangement; Correcting chromosomal activating protein (RAGI), promyelocytic leukaemia zinc finger protein activating the set of primers. The new set of nucleic amplification comprising the set of primers. The new set of nucleic amplification comprising the set of primers. The new set of nucleic amplification primers capable of amplifying a VH-JH or DH-JH IGH, Vk-JK or VK/intron-CKG, Vdelta-Jdelta, Ddelta-Ddelta TCRB rearrangement TCRG, Vdelta-Jdelta, Ddelta-Ddelta TCRB rearrangement TCRG, und in agnosing lymphoproliferative disorders. The present transfer in the present in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New set of nucleic amplification primers comprising a forward primer and a reverse primer and capable of amplifying a rearrangement, useful in diagnosing lymphoproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic acid amplification; primer; PCR; detection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADM94102;
                                                                                                                                                                                                                                                                                        RESULT 382
```

```
The invention describes an animal model for identifying agents which alleviate the symptoms of, treat, reduce the severity of, or prevent alleviate the symptoms of, treat, reduce the severity of or prevent because the symptoms of, treat, reduce the severity of or prevent preclampsia which has been introduced to the severity of or prevent preclampsia which has been introduced to the severity of or prevent preclampsia which has been introduced to the severity of or prevent preclampsia which has been introduced to the severity of or prevent or amelioration or alleviation or prevention of preclampsia and/or the symptoms; a method of detecting placental preducing an animal suffering from preclampsia; a method of another produced according to the methods above. The development of the model produced according to the methods above. The development of the model produced according to the methods above. The development of the creament. The animal model is useful for identifying nucleic acid. Treatment. The animal model is useful for identifying nucleic acid. Treatment The animal model is useful for identifying nucleic acid. With preclampsia and its development, especially those that up. or downers actual administration to the patient having the disease. And can aid in the prognosis of a patient. The animal model is useful for identifying or creating other animal models based upon the BPH/5 phenotype observed creating other animal models based upon the BPH/5 phenotype observed creating other animal models based upon the BPH/5 phenotype observed creating other animal models based upon the BPH/5 phenotype observed creating other animal models based upon the BPH/5 phenotype observed creating other animal models amouse vascular endothelial growth factor (VEGF) PCR primer used in real time PCR compare placental gene compare placental gene and cST controls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New animal model comprising a pregnant borderline hypertensive (BPH/5) mouse and an agent introduced to the mouse, useful for identifying agents which alleviate the symptoms of, treat, reduce the severity of, or
                                                                                                                                                                   gynaecological; animal model; preeclampsia; pregrant borderline hypertensive mouse; pregnant borderline hypertensive mouse; placental abnormality; surrogate patient; prognosis; preclinical testing; placental pathology; mouse; VEGF; vascular endothelial growth factor; PCR; primer; real time PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 21 BP; 5 A; 6 C; 5 G; 5 T; 0 U; 0 Other;

The present invention describes a new composition comprising an isolated polypeptide for modified Bacillus thuringiensis crystal proteins (CrylC). The polypeptide of the composition is insecticidally-active against Lepidopterans. The composition is toxic to an insect cell and comprised within an insecticidal formulation can be used as a plant protective spray which is toxic to caterpillars, beetles and mosquitoes. The polypeptide of the composition may be used to kill an insect through ingestion of the composition may be used to kill an insect through with the composition directly or by ingestion of a plant coated with the composition or a transgenic plant that expresses the polypeptide composition. The insecticidal proteins produced by B. thuringiensis are harmless to plants and other non-targeted organisms but toxic to their specific target insect. The polypeptides have improved toxicity so a reduced amount of bioinsecticide per unit area of treated crop can be used allowing economic and efficient utilization in the field. The
                                                                                                                                                                                                                                                                                                                                                                             New modified delta-endotoxin crystal proteins from Bacillus thuringiensis

                                                                                                                                                                                                                                                                                                                      Mutant; CrylC delta-endotoxin; CrylC.579; insecticidal activity; control; insect; Lepidoptera; Spodoptera exigua; Plutella xylostella; Trichoplusia ni; Spodoptera frugiperda; PCR primer; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PCR primers AAV27859-60 were used in the course of the invention to create mutants of the CrylC delta-endotoxin of Bacillus thuringiensis. The mutant proteins show insecticidal activity, and can be sprayed onto plants or expressed in transgenic plants for the control of insects, particularly Lepidopteran psets such as Spodoptera exigua, Plutella xylostella, Trichoplusia ni and Spodoptera frugiperda
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Bacillus thuringiensis nucleic acid segments - comprising delta-
endotoxin gene fragments, used for the control of insects, particularly
Lepidopteran pests.

The invention relates to an isolated CrylCa* delta-endotoxin polypeptide useful as an insecticide. Cry is a crystal protein from B. thuringiensis. The isolated CrylCa* delta-endotoxin polypeptide comprises: (a) one or more amino acid mutations in the loop regions between alpha helices 4 and 5 of domain 1; (b) one or more amino acid mutations in the loop region between alpha helices 6 and 7 of domain 1; or (c) has improved activity against Lepidopteran insects relative to a native CrylCa* delta-endotoxin polypeptide. The CrylCa* delta-endotoxin polypeptide is useful as an insecticide, particularly for killing Lepidopteran insects or insect cells. The present sequence is a mutagenic PCR primer used to produce a mutant CrylC protein of the invention
                                                                                                The present invention relates to novel transgenic plants comprising Cryl delta-endotoxin genes, in particular crylC genes that encode modified crystal proteins having improved resistance to Lepidopteran insects. The plants that express the mutated CrylC delta-endotoxin crystal proteins are monocotyledonous (corn, wheat, oat, rice, barley, turf grass, pasture grass) or dicotyledonous (legume, soybean, cotton, fruit, berry, tree). The present sequence is a PCR primer which is used for mutagenesis of Bacillus thuringiensis (RXIC DNR. This sequence is used in the exemplification of the invention
Transgenic plants, comprises nucleic acid encoding CrylC delta-endotoxin polypeptide, has improved resistance to Lepidopteran insects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CRYIC; ss; delta-endotoxin; insecticide; PCR; primer;

                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes isolated Bacillus thuringiensis CrylC delta-endocoxin polypeptides having: (i) at least one amino acid (aa) mutation in the loop region between alpha-helices 6 and 7 of domain 1; and (ii) better activity gainst Lepidoptera than the native CrylC. The polypeptides, possibly after activity of pores and disturbing crylC. The insects, kills insect cells by formation in the digestive tract of homeostasis. The polypeptides are used to control lepidopteran pests on plants, either: (i) applied as a composition; or (ii) expressed in plants from heterologous nucleic acid (generating insect-resistant plants). They are more active against Lepidoptera than native CrylC. MAA08144 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a nucleic acid segment comprising a delta-
endotoxin gene encoding a Cryl crystal protein. The nucleic acid segment
is useful for a recombinant expression method to prepare a recombinant
polypeptide useful as bioinsecticides. The present sequence is a PCR
primer used to amplify Crylc DNA
                                                                                                                                                                                                           Delta-endotoxin gene; Cryl crystal protein; bioinsecticide; transgenic;
                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid segment comprising a delta-endotoxin gene encoding a Cryl crystal protein, useful for a recombinant expression method to prepare a recombinant polypeptide useful as bioinsecticide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, ALMS1; chromosome 2, 2p13; Alstrom disease; retinal dystrophy; cardiomyopathy; endocrinopathy; diabetes; Alstrom syndrome; cardiant; ophthalmological; antidiabetic; hepatotropic; nephrotropic; gene therapy;
                                                                          Delta-endotoxin; crystal protein; CrylC; insecticide; lepidopteran; PCR;
PCR primer H used to generate Bacillus thuringiensis CRYIC mutant gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to synthetically modified Bacillus thuringiensis Cryl delta-endoroxin genes in particular crylc genes encoding modified crystal proteins having improved insecticidal activity against crystal proteins having improved insecticidal activity against lepidopterans. The invention is useful as insecticides for topical and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /or systemic application to field crops, grasses, fruits or vegetables and ornamental plants. The present sequence is a PCR primer used to generate Bacillus thuringiensis CRYIC mutant crystal protein gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
